

LOOKINGGLASS

SCOUTPRIME™

The Platform for More Intelligent Security Management

ScoutPrime is the command center for your security operation. The platform centralizes the collection and normalization of structured and unstructured data, including 87 out-of-the-box feeds, as well as other commercial data feeds you may have purchased.

It identifies the highest priority threats to your organization with the LookingGlass patented Threat Indicator Confidence™ (TIC) scoring – this is then tuned based on your risk tolerance profile. Your analysts can communicate incidents, collaborate with other analysts, or create a ticket with the incident management system.

Export threat intelligence in a variety of formats, via an API that allows for tailored data sets, or a third party system integration via custom scripts to orchestrate active defense via your security appliances. ScoutPrime is integral to achieving your cybersecurity mission.

Establish Your Risk Tolerance

Organizations establish risk based on the premise of what they are and aren't willing to accept. Their risk tolerance has to respond to uncontrollable events. ScoutPrime understands the constant battle an organization faces and allows for configuration to the TIC score. The TIC score is calculated based on the level of trust LookingGlass has on a specific threat, and is modifiable to your comfort level. ScoutPrime easily aligns with an organization's risk tolerance, ensuring it remains flexible for needed tolerance adjustments to daily threats.

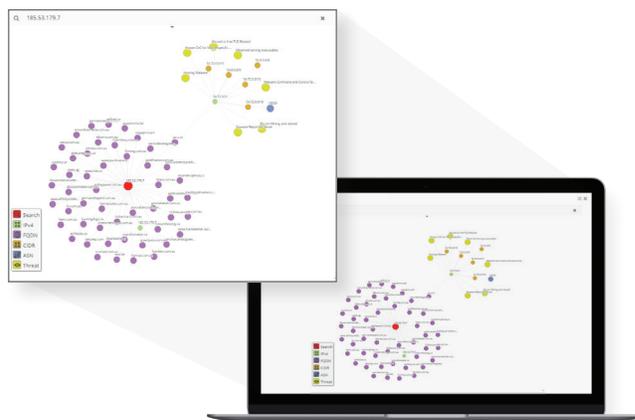

Make it Matter

Having the entire Internet available at your fingertips makes it difficult to manage incidents. All the pertinent tiny pieces of information can easily be lost and can open an organization to vulnerabilities. ScoutPrime delivers insight on threat intelligence that is relevant to you by categorizing and organizing network elements into a repository called Collections. ScoutPrime's Collections establish a perimeter around your network and enhances your awareness to any unwelcome malware, viruses, or C2 commands.

Augment Your Security Posture

Security operations should never have to rip and replace their systems when introducing a new system to their security infrastructure. ScoutPrime is designed to integrate with current systems, with low friction setup, to immediately get up and running. Protecting your organization is already difficult, why should you make setting up its protection difficult too?

Visualize your network elements for actionable insight into mitigating threats to your organization

FEATURES	BENEFITS
Incident Management	<ul style="list-style-type: none"> Easily collaborate and share threat data and analysis with team members or other groups within your organization Workspace customization provides environments for repeatable analysis or investigation
Threat Indicator Confidence (TIC) Scoring	<ul style="list-style-type: none"> Find relevant intelligence faster and reduce “alert fatigue” by ranking threats based on factors such as an organization’s environment, threat landscape, and security posture Proprietary to LookingGlass and only available in ScoutPrime
Investigation Tools	<ul style="list-style-type: none"> Analyst can access tools like Shodan, pDNS, WhoIS and Reverse WhoIs, and geolocation information within the platform, assisting in their day-to-day tasks
Aggregated Threat Data	<ul style="list-style-type: none"> Access to the largest collection of threat intelligence data gleaned from a wide variety of sources, including LookingGlass proprietary intelligence and LookingGlass machine-readable threat intelligence
Automatic Notifications	<ul style="list-style-type: none"> Learn about relevant incidents faster by receiving alert trigger notifications based on any expression used in the advanced search system
Graph Explorer	<ul style="list-style-type: none"> Faster visualization of relationships between network entities and threat intelligence Rapidly pivot to related elements based on ASNs, CIDRs, FQDNs, IPs, and observables
STIX and TAXII 2.0 Support	<ul style="list-style-type: none"> Rapidly discover new and emerging cyber threats with industry threat intelligence sharing
Extensible API	<ul style="list-style-type: none"> RESTful API to easily integrate with other security analytics tools
Nested Collections	<ul style="list-style-type: none"> Granular analysis on the network
Inherited Threats	<ul style="list-style-type: none"> Understand threats from a higher level. Map threats back to the CIDR or network blocks to which they are associated Expanded element model includes ASNs, FQDNs, Owners, IP addresses, and Malware Hashes

ABOUT LOOKINGGLASS CYBER SOLUTIONS

LookingGlass Cyber Solutions delivers unified threat protection against sophisticated cyber attacks to global enterprises and government agencies by operationalizing threat intelligence across its end-to-end portfolio. Scalable threat intelligence platforms and network-based threat response products consume our machine-readable data feeds to provide comprehensive threat-driven security. Augmenting the solutions portfolio is a worldwide team

of security analysts who continuously enrich our data feeds and provide customers unprecedented understanding and response capability into cyber, physical, and third party risks. Prioritized, relevant, and timely insights enable customers to take action on threat intelligence across the different stages of the attack life cycle.
