The LookingGlass® Aeonik Security Fabric is a next-generation Intrusion Detection and Prevention System (IDPS) providing comprehensive visibility and advanced threat response for complete and effective defense across your enterprise network. Aeonik illuminates all areas of the environment to quickly identify, hunt, disrupt, and respond to adversary activities at the moment and point of attack. A software-based solution that requires no specialized hardware, Aeonik’s framework allows for flexible deployment - whether on-premise, cloud, or hybrid - and in as many locations as desired.

SECURITY WOVEN INTO YOUR NETWORK

Aeonik’s software-based framework combines network traffic analysis, behavior and signature-based detection, threat intelligence, and advanced threat response delivering coordinated detection and mitigation at line rate. This approach allows for dynamic detection and response to malicious behavior across the entire enterprise the first time it is seen anywhere on the network. This orchestration within zones pushes responses throughout the fabric, so no matter where the event is detected, the appropriate response will occur everywhere deemed applicable.

NOT JUST INTEGRATION, BUT INTEROPERABILITY

Built on open standards and protocols including OpenFlow and STIX 2.1, Aeonik supports current and future security investments. Aeonik also comes “out of the box” with pre-built integrations for leading SIEMs, Threat Intelligence ingestion, and other common elements of the security stack using formats like Common Event Format (CEF) and Log Event Extended Format (LEEF). Aeonik is the answer to the evolving software-defined, borderless network environment, reducing the need for custom integrations and offering standards-based interoperability.
LookingGlass is a leader in intelligence-driven risk mitigation, including global attack surface monitoring, threat modeling, and network defense. Our full-service portfolio integrates threat intelligence, analysis, and a robust set of tools to operationalize threat mitigation in the network.

About LookingGlass Cyber Solutions

LookingGlass is a leader in intelligence-driven risk mitigation, including global attack surface monitoring, threat modeling, and network defense. Our full-service portfolio integrates threat intelligence, analysis, and a robust set of tools to operationalize threat mitigation in the network.

With standard and custom solutions, LookingGlass makes cyber security smart and seamless for governments and enterprises.
